and beneficial insects, providing and pollination in greenhouses, nurseries and home gardens. provide favorable habitats, such (nectar, pollen and attracted reproduction and shelter. Below annual and native wildflowers that several beneficial insects.

Marigold

Indian Blanket

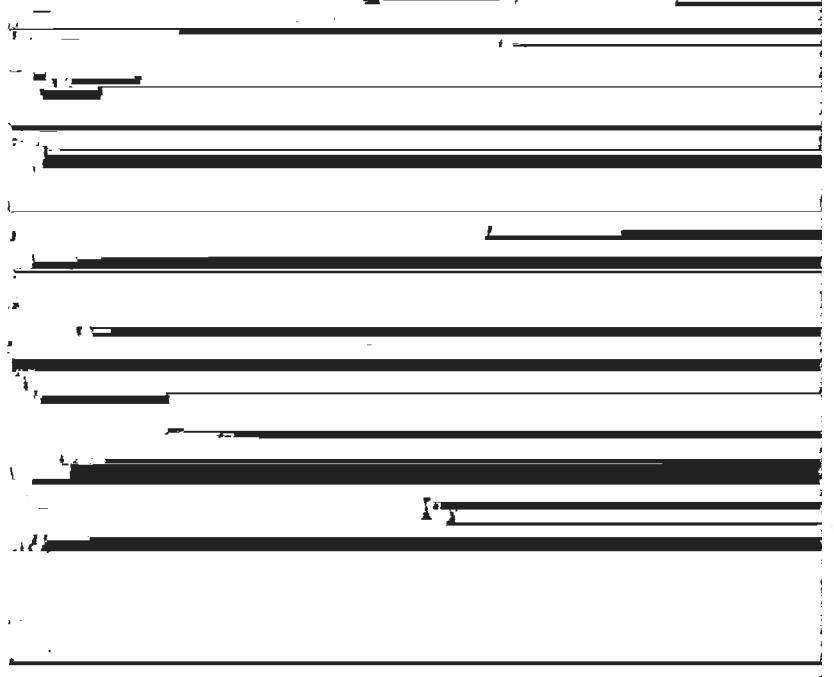

innia

Sunflower

Sweet Alyssum

Wild Cosmos

Blue Cornflower

Syrphid/Hover fly
larvae/maggots (above) and the
adults and larvae of Soldier
(below) and Lady (left) beetles
consume a variety of soft-bodied
pests. The adults are also
important pollinators.

Soldier Beetle Adult
(left & below)

Most of these beneficial insects prey on several pest species of aphids, thrips and small caterpillars. Attracting them into your growing area may reduce the need for natural enemy releases and chemical insecticide sprays.
