Objectives:

ve Brook sites of the [REDACTED] Continuous monitoring at the VMC Mouri Mansfield and I

[REDACTED]

Method

[REDACTED]

AIDM-N is a grant based precipitation monitoring program established at the end of

[REDACTED]

protocol and measures the variables of the NADP program. The sampler is located at the

CASPER, Colorado, 11 miles southwest of the town of H. The station is

Precipitation-weighted concentrations were calculated for annual, seasonal and monthly

Deposition (kg/ha) was calculated for chemicals reporting concentration in mg/l for annual, seasonal and monthly time steps. Total Nitrogen (Total N) deposition was

summed.
