<p>UVM UVM UVM</p>	<p>Nivaldo J. Tro's Chemistry: Structure and Properties, 2nd Edition</p> <p>Mastering Chemistry (Pearson HigherEd)</p> <p>Every student enrolled in CHEM 031 must be able to access Pearson HigherEd's Mastering Chemistry site in order to complete and get credit for the required online quizzes (Mastering Chemistry is 12.5% of your total course grade). There are many options for gaining access to this online site but, ultimately, it is up to you - the student - to decide what is best for your learning style and financial situation. There are many options that I feel are worth your consideration:</p> <ul style="list-style-type: none"> <li>UVM Bookstore - This is the package that is available at the UVM Bookstore and provides complete online access to all published materials (the eText version of Tro's textbook, assigned problems and online quizzes via Mastering Chemistry, etc.) plus a loose-leaf (i.e., unbound) print copy of Tro and a print copy of the Solutions Manual. For just under \$40 more than online-only access, this is the best way to go if you want to have some kind of hardcopy of the text and/or solutions to the assigned problems.</li> <li>UVM - This provides you with complete online access to all of the published materials needed for the course. This is available only through the Pearson HigherEd website and will provide you with the access code needed to log onto Pearson's</li> </ul>

Please bring any questions which were not answered during the lecture hour. I will have specific office hours for individual questions and will hold group discussions. If you cannot come at those times, I would like to make an appointment for a more convenient time. In addition, feel free to stop by my office at any other time, but I cannot guarantee that I will be there or that I will not be busy. I also appreciate any anonymous comments, questions, or concerns that may be left in the cardboard box at the exit of the lecture room. I will pick these up at the end of each lecture and will address them at the following lecture, or individually, as is necessary. On the course Blackboard site, you will find an "electronic comment box" that will allow you to submit your anonymous comments electromagically.
